

## VieVS vgosDb Analyzer

The VieVS vgosDb analyzer offers you the possibility to spot the content of the vgosDb NetCDF files.

### Run vgosDb Analyzer

Load VieVS VGOS DB analyzer with right click on session in the list of loaded sessions and click on Analyze NetCDF file.

The Database content is structured by station folder and by other folders. Once you have selected a folder you can select a file in the Files dropdown menu. If you have selected a file the list of variables (parameters) stored in this file are displayed in the table of the variables. The table shows you information about the Name, Type and Value of the parameter. If you want to plot the data of a parameter, simply click on the desired parameter.
