QC = 0 Fringes not detected.

= 1-9 Fringes detected, no error condition. Higher #, better quality.

= B Interpolation error in fourfit.

= D No data in one or more frequency channels.

= E Maximum fringe amplitude at edge of SBD, MBD, or rate window.

= F "Fork" problem in processing.

= G Fringe amp in a channel is <.5 times mean amp (only if SNR>20).

= H Low Phase-cal amplitude in one or more channels.

= N No valid correlator data.

Tot Total number of scans in schedule.

Minus Scans in original schedule file for which correlation was not
attempted, usually because of known station problems.
